This means that, while the wait to the US is expected to last less than 12 hours, this time period is expected to increase dramatically in the coming days. "The quota at the US border is a biometric passport so that once you get to the border you can leave Mexico without having to wait for hours. They have created a situation where you have to wait less to go to Mexico than you have to wait to get into the US. They are basically jamming the US. They are basically controlling the flow of people in Mexico," said a Mexican immigration official. The official continued saying "We are going to see a big increase in Cuban immigration due to the inauguration of former Mexican President Fox. We expect the Cuban quota to increase from about 30,000 to 45,000 in the next 3 months."For more than 40 years, the Royal Canadian Navy has depended on the design and operation of the AN/SPS-64(V) radar system, which is in use on surface combatants, submarines and special purpose vessels. The system is worn in three configurations, Type 10, Type 11 and Type 12, and carries two 3-by-3 antenna modules for the short and long wavelength (S and L) channels. In the 1960s, the Canadian Forces began exploring a major upgrade of the AN/SPS-64(V) radar system. The new design, to be known as the AN/SPS-64(V)B, was to combine a low-noise-amplifier (LNA) with a back-to-back converter (BTC) in a single unit, making use of the S and L channels at the same time. The Canadian Forces selected the AN/SPS-64(V)B LNA-BTC radar in an international competition for a new fighter radar, which was awarded in 1983 to France's Thales. The AN/SPS-64(V)B radar has

AutoCAD Vectors help you import and incorporate assets into your model with vector-based properties. Work with a 2D layer or embed vector shapes in the 3D model. (video: 1:24 min.) An interactive drawing helps you better understand and visualize your work with integrated annotation and measurement tools. Share annotations as you work, or move them to other drawings. (video: 1:48 min.) View the evolution of 2D vector and multi-point drawing commands in the "Insert Layer > 2D Drawing" panel. (video: 1:18 min.) The Geometry and Editing toolbar now has an automatically attached Dynamic Lines option. (video: 1:08 min.) Improved performance and efficiency with the PDF import tool. (video: 1:16 min.) The Feature and Dimension tools have been updated to handle the import of text layers. (video: 1:24 min.) In AutoCAD 2023, you can import your DWG, DXF, or DWT files into Draw and Design. You can import 3D objects and 2D layers, or you can import the drawings' visible features, but not hidden ones. (video: 1:18 min.) With new document-level settings, you can switch between flat and wrapped paper display for your drawings, and you can hide parts of your drawings when printing, so it doesn't display unnecessary information. (video: 1:29 min.) Quickly freeze a drawing to take it offline for collaboration. (video: 1:20 min.) New command prompts for the AutoCAD command-line interface (CLI) and options for DGN files. New F1 help for the AutoCAD command-line interface. (video: 1:45 min.) New commands for creating and manipulating drawings and drawing components, including an interactive 3D drawing. (video: 1:19 min.) Buildings and diagrams are more interactive and easier to annotate with many improved drawing components. (video: 1:43 min.) Use the new MiniDisplay frame to see changes on the same screen with the current document, or you can review them in a new document. (video: 1:26 min.) Geometric simplification commands have been improved. (video: 1:31 min.) Tools to help you work faster
