We all have to be younger at some point, right? I know I do. I want to develop skills that keep me relevant beyond a particular job and career, and hopefully I get to the point when I can legitimately consider myself an expert in a particular domain. It's a vain hope, of course. I'm a lousy programmer, a lousy accountant, and a lousy web designer. An investigation of morphology and 3D shape in the early stages of secondary malignant melanoma. Cancer is a group of diseases that share the ability to grow, invade, and spread in a way that threatens the life of an individual. Malignant melanoma (MM) is one of the most aggressive forms of skin cancer. Unfortunately, no effective treatment or prevention strategies exist to date for the late stage of this malignancy, which is a very serious condition that is difficult to cure and which may even be fatal. However, recent research has demonstrated that there are some preventive procedures that could be useful in the battle against MM. The aim of this study was to identify the most significant differences in the shape and morphology of early stage of skin MM among patients. Sixteen patients who had the first clinical diagnosis of MM and were treated at the Dermatology Clinic of the University Hospital of Goiânia, GO, Brazil, were enrolled in this study. Digital skin images were obtained using a video microscopy system and analyzed by the MicroView® software. We used a procedure based on graph cuts to segment each image from the others. Results of this analysis demonstrated that differences of shape and morphology exist among different patients and that these differences can be relevant in this early stage of MM. These results may be useful in future studies that investigate morphological changes in MM over time. Here is a gift you may not have thought of: A good time reading to a child can be a wonderful thing for the both of you. Well, maybe it's not only reading, but also feeding the little ones, since they can't read. Any way, here is a simple enough activity to feed your child (and yourself) with. I came up with this book you can read to your kids in the bathtub. Everyone's favorite. Sounds strange? Well, it's not! You just have to do it right, and like everything else, it takes practice. You simply have to cut out the pages you want your child to read for you. The ones at the bottom are

Well in my code I want to read from a file, but I keep getting this error: error: unknown type name 'pair' I am struggling with that for the last two hours and I thought I would ask for help in this, so I am clearly missing something, as my program is fairly simple: #include #include #include typedef struct { int r; int c; } pair; pair invert (pair a){ pair b = { a.r, a.c }; return b; } int main(){ FILE* h_file; h_file = fopen("test.txt", "r"); pair *x = (pair *)malloc(sizeof(pair)); x->r = 1; x->c = 2; *(pair *)&x[0] = invert(*(pair *)&x[0]); free(x); return 0; } A: In C, you have to dereference a pointer to struct pair first. Otherwise, you are just assigning a dereferenced pointer value to a pointer value, which is wrong. Also you are allocating a dynamically-allocated struct with malloc in main and freigning the pointer value without freeing the memory - which causes undefined behaviour, and also will not work. #include #include #include typedef struct { int r; int c; } pair; pair invert (pair *a){ 3e33713323
