samples were obtained from the tail vein at various times after dosing and the drug was determined by high-performance liquid chromatography. The mean values of the area under the curve, the volume of distribution at steady-state, the total body clearance, and the mean residence time of the drug were not significantly different between normal and adriamycin-treated rats. The major metabolites of SK&F 97365 were identified as the M-I and M-II by HPLC and mass spectrometry. The total recovery rate of SK&F 97365 in normal and

The results of this study show that the pharmacokinetics of SK&F 97365 is not altered by a single administration of adriamycin, suggesting that SK&F 97365 is suitable for i.v. bolus administration in the treatment of solid tumors.
