KEYMACRO is a project that aims to provide keyboard macro software for Windows, Linux and Mac. Many of us have used keyboards with special software which sets up macros and allows us to execute sequences of keystrokes when a key is pressed. Currently, this functionality is not available in a single program which is why it is something we have all used at different times. Our goal is to offer a convenient and easy to use solution to accomplish this goal.

Fully customizable keyboard macros KEYMACRO provides the easiest interface for creating and modifying keyboard macros. It is designed to be easy to use and understand and it is far more powerful than any software I have used in the past. As with any software, it can be used for a variety of different functions and it can be used to perform the exact same task as the software I am currently using, but it does it better. Gain more control of your keyboard While some programs allow you to select which keys on your keyboard are used for macros and you can set up custom combinations, KEYMACRO is designed to be customizable and can provide you with additional macro options. KEYMACRO is simple to use, takes a matter of minutes to learn, and is flexible enough to satisfy even the most demanding users. If you are looking for a keyboard macro solution then you can't go wrong with KEYMACRO. Unlike many programs, KEYMACRO is a free program and it is available in both 32-bit and 64-bit versions. Keystrokes, macros, and sequences of macros KEYMACRO contains three key macro modes which allow you to select what you want to do with your keystrokes, macros, and sequences of macros. Keystrokes: Define any keystroke you want to use for any of the following three modes, select the context (what you want to happen when you press that key) and the way to execute the keystrokes (use a sequence or a single keypress). Mute: Mute all input on your computer so you can play music, watch movies or listen to music without hearing any annoying noises.

Toggle: Mute or unmute your keyboard. The keyboard will toggle between unmuted and muted modes. Snooze: Control how long your keys are held down before they automatically trigger their defined function. Keystrokes and sequences: If you want to perform multiple keystrokes, KEYMACRO allows you to do that. You can also define and execute sequences of 77a5ca646e
