## What's New In VSO Media Player?

To play a video, simply select one of the playlists you have created or use the "Choose" button at the bottom of the playlist list. If your video file is not listed in the playlists, you can drag and drop it to the player. Also, if you just want to open a file, then click "Open". A list of possible files will appear on the screen. One of the best features in the player is the possibility to play DVD and Blu-ray discs. Also, you can add subtitles to your files. You can even play DVD and Blu-ray discs with VSO Media Player, so you won't have to install anything else! Since there are many important media files, it is very likely that you will have to browse through a lot of folders in order to find what you want. VSO Media Player is aware of that and automatically searches for videos on a mounted hard disk. If you choose to add a new folder with movies, for instance, you will receive a prompt that you can choose whether you want to import all the new videos into the player or not. If you need to restart your computer, it is best to do so after you have finished playing your movie. This will ensure that the player does not stop playing your movie. If you stop the player before closing the program, it will close immediately, and the media will continue playing in the background. This is what you want to avoid because you might lose important information from the file, or have no idea where the video file is. To save the video file, click "Save As..." and select a different folder. You can find the save location in the "Settings" window. If you want to pause the media player, click the "Pause" button, or press the Pause key on the keyboard. To resume playback, click "Play", or press the Play button. You can also change the volume and brightness of your player. This can be done using the slider in the interface. And finally, if you want to close VSO Media Player, press the "Exit" button. System Requirements: This software doesn't have any specific requirements. However, if you want to use the player, you must have the following system requirements: - Windows XP - Windows Vista - Windows 7 - Windows 8 - Windows 10
