Autodesk had been planning to develop CAD software for over a year. In October of 1980, Autodesk President Steve Berry was able to secure a \$1.5 million US government contract. This money allowed Autodesk to engage in a lengthy period of research and development. At this point, no CAD software existed. In 1981, a program called CAD Director was developed. A "Programmer's Handbook" manual was shipped to Autodesk's CAD developers. The developers were not satisfied with the performance of CAD Director. Their next step was to develop their own graphics processor, and they completed this task in the spring of 1981. The Autodesk graphics processor became the first piece of software to go into production under the name of AutoCAD. AutoCAD ran on Apple II, II+, IIgs.
