To test the hypothesis that fibroblast growth factor (FGF) receptor signaling promotes migration and that this effect is mediated by upregulation of matrix metalloproteinase-9 (MMP-9), we examined the effects of antibody-mediated receptor downregulation on the migration of rat Schwann cells (SCs) on laminin and fibronectin. With an isotype-control antibody, migration on both laminin and fibronectin was increased, but with a receptor-specific antibody, migration on laminin was increased to a greater extent than on fibronectin. This effect was abolished by addition of a specific MMP-9 inhibitor. Exposure to the

FGF inhibitor SU-5402 had no effect on migration on either laminin or fibronectin. These results suggest that upregulation of MMP-9 is a critical early event during migration of SCs on laminin but not on fibronectin. It is known that FGF promotes migration of SCs in vitro, and our results are consistent with the idea that FGF receptor signaling may be responsible for the migration-promoting effect of the basal lamina on SCs.Q: Updating data in Firebase Database by using a child value I'm trying to update an item value in Firebase Database by using a child's value, but it won't work for some reason.
