Image compressor - for photos, videos and graphic documents. The program converts files into different formats for web-servers, mobile devices and storage. Great tool to resize images to any sizes. But the default settings in the tool are a bit slow and quite unstable. When I want to resize images to small sizes, the tool will become unstable quite often and doesn't always work right. But when the program finishes the resize process, it will be quite fast. I always change the resizing preset to the "UltraFast" and it works great. And also the "VeryFast" preset seems to be a bit faster than the "UltraFast" setting, but still not perfect. It looks like it only works with limited file types. If you try and compress a AVI video with it, it's a mess. Takes a long time and the file is terrible, it's chopped into many, many little files, and the program doesn't give any warnings or give you any sort of visual indication

This sucks because if you make a mistake, you're screwed. The software seems to be very buggy with the rotating feature. It has issues with many video and photo file types. I was trying to rotate an AVI file and it did not work and in fact it gave an error of some sort. The software seems to be very buggy with the rotating feature. The software works well with one of my.png images. The picture was cut off to the right side and it was saved to a wrong path. Anyway, it is not the most important thing.
